

RAPTORWINGS LANGUAGES SETTINGS

You can revise all the text of Raptorwings and also add languages.
You have to adapt the Languages.xml in the folder /bin.
But please make a backup copy of the file first.

You can open and edit the file with the Windows text editor. I prefer <https://notepad-plus-plus.org/>

PAGE 2 – Edit Languages

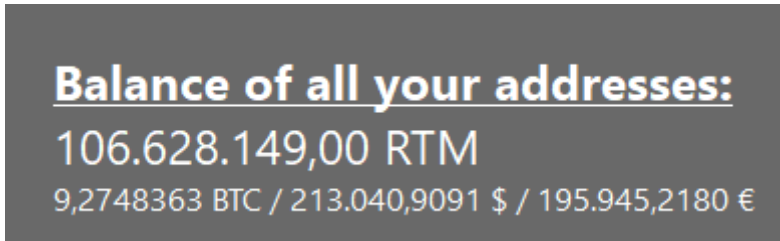

PAGE 3 – NEW Languages

CHANGE LANGUAES

Even we don't do everything right and it may be that you yourself want to adjust text together with us:

Example:

You want to customize the "Balance of all your Addresses" text on the main page:

1. Open Languages.xml with a text editor after you have made a backup of it.
2. Search for "Balance of all your addresses:"

```
<OverviewPage>
  <Labels>
    <Label2>
      <description>Wallet Balace</description>
      <EN>Balance of all your addresses:</EN>
      <GER>Balance deiner Wallet Adressen</GER>
    </Label2>
    <Label4>
      <description>introduction</description>
      <EN>Your GUI for RTM wallets and RTM mining</EN>
      <GER>Dein GUI für RTM Wallets und RTM Mining</GER>
    </Label4>
  </Labels>
</OverviewPage>
```

3. Change the text to your local language:

Exaple:

<EN>Balance of all your addresses:</EN>

Change to: <EN>Balance of all my addresses:</EN>

4. Save the File
5. Restart Raptorwings

NEW LANGUAGES

1. In order to integrate a new language, the country must first be added in the upper area. For example French:

You can find the <Country Code> at:

<http://www.codedigest.com/CodeDigest/207-Get-All-Language-Country-Code-List-for-all-Culture-in-C---ASP-Net.aspx>

Example:

```
<RaptorWings>
  <Languages>
    ....
    <FRENCH>
      <CountryCode>fr-FR</CountryCode>
      <title>Frensh</title>
      <XMCode>FR</XMLCode>
      <Creator>Name of Translator</Creator>
    </FRENCH>
  </Languages>
```

2. In a further step, the individual elements must be stored with the language:

Out:

```
<Label2>
  <description>Wallet Balace</description>
  <EN>Balance of all your addresses:</EN>
  <GER>Balance deiner Wallet Adressen</GER>
</Label2>
```

will:

```
<Label2>
  <description>Wallet Balace</description>
  <EN>Balance of all your addresses:</EN>
  <GER>Balance deiner Wallet Adressen</GER>
  <FR>Solde de toutes vos adresses :</FR> (Google Translation, sorry)
</Label2>
```
